DEC-K-ING PVC Waterproofing Membranes

Product Information

Description

Skellerup Viking DEC-K-ING PVC waterproofing membrane is reinforced with a polyester fabric mat to form a hard wearing, 100% waterproof surface that is attractive; UV resistant; grippy underfoot; and is easy to maintain.

Dec-K-ing also has the advantage of its seams being joined by heat welding.

Applications

Although mainly used for residential roof-decks and gutters as a complete, all-in-one aesthetic waterproofing solution; Dec-K-ing is also found in commercial settings such as apartment blocks; surf clubs, and institutions requiring waterproofing and maximum grip underfoot for areas such as ramps and walkways.

Finishes and colours

Dec-K-ing membrane has a stipple finish for maximum grip; and has five attractive earthy colourways: Stonehenge, Sandy Landau Grey; Sandy Pearl, Fawn and Sandy Granite.

Dimensions

1.5mm thick x 1.83 metres wide x up to 125 metre long rolls*

* Dec-K-ing is supplied in rolls cut to length based on measurements supplied by the Skellerup Viking Approved Applicator. The maximum cut roll size dispatched is 23metres long
